HEALTHCARE SKILLS

- Digital Health
- Health Informatics
- Electronic Health Records (EHR)
- Hospital Information Systems
- Clinical Decision Support Systems (CDSS)
- FHIR R4
- Healthcare Data Standards
- ICD-10 Concepts

AI & DATA SKILLS

- Artificial Intelligence
- Machine Learning Fundamentals
- AI in Healthcare
- Predictive Analytics
- Explainable AI Concepts
- Healthcare Data Analytics

SOFTWARE DEVELOPMENT

Languages: Java, Kotlin, Dart, JavaScript

Frameworks: Spring Boot, Flutter, React.js, Vite

Web & Data: HTML5, CSS3, REST APIs, PostgreSQL

Tools: Git/GitHub, Docker (Basics)

RESEARCH INTERESTS

- AI in Healthcare
- Digital Health Research
- Clinical Decision Support Systems
- Healthcare Data Science
- Medical AI Systems
- Healthcare Innovation
- Interoperable Healthcare Systems

PORTFOLIO

jmniroshanhealthit.netlify.app

PROFESSIONAL PROFILE

Digital Health Developer and Health Informatics undergraduate with a strong interest in Artificial Intelligence, Electronic Health Records (EHR), FHIR R4 interoperability, Clinical Decision Support Systems (CDSS), and healthcare data management. Combines software engineering, healthcare data standards, database technologies, and AI-driven approaches to build solutions that support modern digital healthcare workflows and clinical decision-making.

Core strengths: Healthcare Technology | AI Applications | Software Engineering | Interoperability | Clinical Workflow Improvement

EDUCATION

Bachelor of Health Science Honours in Health Information and Communication Technology — **2023 – 2027**
Gampaha Wickramarachchi University of Indigenous Medicine

CERTIFICATIONS

Healthcare Data Security, Privacy, and Compliance — **2026**
Johns Hopkins University | Coursera
Skills: Healthcare data security · Patient data privacy · Healthcare compliance · Secure healthcare information systems

Introduction to Healthcare — **2026**
Stanford Online | Coursera
Skills: Healthcare systems · Clinical environment understanding · Healthcare terminology · Healthcare delivery processes

Medical Terminology I — **2026**
Rice University | Coursera
Skills: Medical terminology · Medical records · Anatomy · Diagnostic tests

PROJECT EXPERIENCE

GovCare EHR – AI Enabled Digital Healthcare Platform
Technologies: React.js · PostgreSQL · FHIR R4 · REST APIs · Healthcare Informatics

- Designed a healthcare information system concept covering Electronic Health Records (EHR), patient data management, and clinical workflows.
- Modelled healthcare data exchange with FHIR R4 and REST APIs to support system interoperability.
- Structured a PostgreSQL healthcare database with role-based access control to protect sensitive patient information.
- Incorporated AI-assisted Clinical Decision Support System (CDSS) integration to support clinical decision-making.

Digital Health Portfolio Platform

- Designed and developed a healthcare technology portfolio platform with a responsive user interface.
- Applied modern web development practices and user-centred design principles to demonstrate healthcare software engineering work.

CAREER OBJECTIVE

To contribute to digital healthcare innovation by developing secure, scalable, and user-centred healthcare applications that combine artificial intelligence, health informatics, healthcare data standards, and modern software engineering practices to improve healthcare workflows and decision-making.
